A blue Tesla Model S is shown driving on a road during sunset. The car is positioned in the center-left of the frame, moving towards the right. The background features a warm, orange and yellow sky over a horizon line. The car's headlights are on, and the wheels are blurred to indicate motion. A white rectangular box with the word "TESLA" in black capital letters is overlaid on the front of the car.

For other uses, see [Nikola Tesla \(disambiguation\)](#).

Nikola Tesla (/ˈtɛslə/; Serbian Cyrillic: Никола Тесла,^[2] pronounced [nǐkɔla tɛsla];^[a] 10 July [O.S. 28 June] 1856 – 7 January 1943) was a Serbian-American^{[5][6]} inventor, electrical engineer, mechanical engineer, and futurist best known for his contributions to the design of the modern alternating current (AC) electricity supply system.^[7]

Born and raised in the Austrian Empire, Tesla studied engineering and physics in the 1870s without receiving a degree, gaining practical experience in the early 1880s working in telephony and at Continental Edison in the new electric power industry. In 1884 he emigrated to the United States, where he became a naturalized citizen. He worked for a short time at the Edison Machine Works in New York City before he struck out on his own. With the help of partners to finance and market his ideas, Tesla set up laboratories and companies in New York to develop a range of electrical and mechanical devices. His alternating current (AC) induction motor and related polyphase AC patents, licensed by Westinghouse Electric in 1888, earned him a considerable amount of money and became the cornerstone of the polyphase system which that company eventually marketed.

Attempting to develop inventions he could patent and market, Tesla conducted a range of experiments with mechanical oscillators/generators, electrical discharge tubes, and early X-ray imaging. He also built a wirelessly controlled boat, one of the first ever exhibited. Tesla became well known as an inventor and demonstrated his achievements to celebrities and wealthy patrons at his lab, and was noted for his showmanship at public lectures. Throughout the 1890s, Tesla pursued his ideas for wireless lighting and worldwide wireless electric power distribution in his high-voltage, high-frequency power experiments in New York and Colorado Springs. In 1893, he made pronouncements on the possibility of wireless communication with his devices. Tesla tried to put these ideas to practical use in his unfinished Wardenclyffe Tower project, an intercontinental wireless communication and power transmitter, but ran out of funding before he could complete it.

Tesla's electric car charger becoming the US standard

Bloomberg 13 June 2023

f t w e in

Your email address

Tesla Inc.'s charging technology won more backers as a handful of players in the electric vehicle power industry said they would offer compatible equipment, further solidifying the automaker's system as the US standard.

ChargePoint Holdings Inc., Blink Charging Co., EVgo Inc. and Wallbox NV each said Monday they will have chargers capable of working with Tesla's North American Charging Standard, which is quickly winning in a competition with the so-called Combined Charging System.

← Australia's Tritium DCFC Ltd. also said it would offer a NACS connector option with its chargers.

Shares of ChargePoint, Blink, Wallbox and Tritium each rallied more than

About the Tesla Model 3

- ✔ Fabulous to drive
- ✔ Impressively practical
- ✔ Affordable, with a long range

The Tesla Model 3 has an airy, modern, clean-living vibe and is the electric benchmark for range, performance and tech. It's Tesla's most affordable car, with space for five, challenging the popular Audi A4 and BMW 3 Series, as well as electric newcomers like Kia's EV6. Best of all, Model 3 ownership opens the door to the Tesla supercharging club which banishes range anxiety thanks to the car's ability to talk to the chargers in real time, telling you what's free and how long it will take to charge.

SpaceX's Starship rocket explodes shortly after take-off

By Katherine Falter
Thursday 20 Sep 2023 2:36 pm

SpaceX, the biggest rocket firm in the world, exploded shortly after take-off on Thursday afternoon - but SpaceX still called the mission a success.

The rocket, which weighs 1,200 tonnes, blasted off at 2.33pm EDT from SpaceX's Boca Raton. Cheering the launch and tower, its 33 engines burned the rocket upward at hundreds of miles an hour.

All around three minutes into the mission the rocket tilted into a

Electron, le petit lanceur de RocketLab, n'est peut-être pas capable de rentrer au bercail tout seul comme ceux de SpaceX... mais ça n'a pas empêché ses concepteurs de le récupérer.

© RocketLab

Depuis quelques années, c'est incontestablement **SpaceX** qui fait la pluie et le beau temps dans l'aérospatiale américaine. Mais ils ne sont pas les seuls; en arrière-plan, il existe aussi tout un écosystème d'entreprises extrêmement compétentes qui font des merveilles dans l'ombre du colosse médiatique. Parmi elles, on peut citer Rocket Lab, qui vient de réaliser un exploit retentissant en rattrapant son lanceur ...en hélicoptère.

Elon Musk subpoenas Twitter founder Jack Dorsey ahead of court battle

22 August 2022

Elon Musk has launched legal action to summon Twitter co-founder Jack Dorsey to appear in court as part of his legal battle with the tech company.

Mr Musk is seeking to end his \$44bn deal for Twitter after alleging the firm failed to provide enough information on fake account numbers.
